## FOR IMMEDIATE RELEASE

### LANDSCAPEPRO v3 SOFTWARE LAUNCHED, NOW WITH ARTIFICIAL INTELLIGENCE

**December 18, 2018. London, UK.** Anthropics Technology announced today the launch of LandscapePro v3 software, now powered by artificial intelligence. The award-winning dedicated landscape photo editor features advanced image recognition technology, atmosphere adjustment tools, object removal tools, new skies, overlay and logo facilities, sharpening and clarity tools, and improved straightening tools, among other unique time-saving features. This significantly simplifies and speeds up outdoor and nature photo retouching.

#### Advanced Image Recognition Technology — Powered by Artificial Intelligence

LandscapePro 3 is better than ever at detecting features in your landscapes. Simply drop the labels in place and the software finds the areas automatically. Less manual selection means you can edit your images in no time.

#### Atmosphere

Enhance landscape photos with atmospheric effects such as rain, fog, lens flare and more. Weather features adapt to your landscape and are reactive to objects and distance, allowing them to blend perfectly with your scene.

## Remove Objects

Remove unwanted objects from your landscape in seconds. First, paint over the object you want to remove with the Clone brush, then simply choose what you would like to replace it with.

## All New Skies

A brand new selection of skies ready to enhance your outdoor photographs. Choose from one of over 150 in the built-in library or import one of your own. You can now also flip skies horizontally giving you even more options.

## Overlay

With the new overlay tools, you can add a layer on top of your original image. Protect your photography online by adding your own logo or watermark.

## Sharpen and Clarity

Easily correct focus and texture with the new Sharpen and Clarity sliders. Each section now has its own set of sliders so you can adjust all of the elements of your image independently for the perfect result.

## Smart Filter Capability

Streamline your workflow with the new Smart Filter capability. Switch easily between Photoshop and LandscapePro for even easier and more personalised editing that suits your style. Exclusive to LandscapePro Studio 3 and LandscapePro Studio Max 3.

## EDITIONS

**LandscapePro Standard** - dedicated landscape photo editing.

**LandscapePro Studio** - handles RAW files, 48 bit per color TIFFs, supports different color spaces, and can be run as a plug-in for Photoshop, Lightroom and Elements.

**LandscapePro Studio Max** - includes Batch Mode and histogram panel for maximum control.
